Govt.M.H.College of Home Science and Science (Autonomous) Jabalpur

SYLLABUS OF M.A. /M.Sc. MATHEMATICS SEMESTER SYSTEM SEMESTER – I
(Session 2018- 19 and onwards)

Syllabus opted by the board of studies in Mathematics

S.No.	Paper	Name of the Papers	Theory (MM)	Min. Pass. Mark	C.C.E.	Min.Pass. Mark	Practical M .M.	Min.Pass mark	Total
1	I	Advanced Abstract Algebra- I	35	12	15	5	–	–	50
2	II	Complex Analysis- I	35	12	15	5	–	–	50
3	III	Functional Analysis	35	12	15	5	–	–	50
4	IV	Real Analysis	35	12	15	5	–	–	50
5	V	Topology	35	12	15	5	–	–	50
6	Two Seminars and Attendance		40 + 10						50
Grand Total									**300**

1) In project 40 marks is allocated. Out of 40 marks, 15 marks is allocated for project file, 15 marks is allocated for presentation of their project work and 10 marks is allocated for project Viva-Voce examination.
2) In attendance 10 marks is allocated as per ordinance No. 79 of R.D. University Jabalpur.
3) The students, whose attendance is less as per ordinance No. 79 of R.D. University Jabalpur, will not allow to appear in the examination at the close of semester and he/she would be declared having failed in that semester.

Chouhan 25.7.18
Prof. & Head,

Govt.M.H.College of Home Science and Science (Autonomous) Jabalpur

Semester wise Syllabus for Postgraduates As recommended by Central board of Studies and Approved by HE the Governor of M.P.

Session 2018 - 2019 & Onwards

Class	Subject	Semester	Max.Marks	Min.Marks	Paper Title - First
M.Sc.	Mathematics	I	35	12	Advanced Abstract Algebra - I

Unit -- I

Another Counting Principle, Conjugacy relation, Normalizer, Class Equation, Cauchy theorem, Sylow's theorems, Double coset, Second & Third part of Sylow's theorem, Application of Sylow's theorems in finite groups.

Unit -- II

Series of Groups: Normal and Subnormal series, Composition series,Zassenhaus lemma, Schreir refinement theorem, Jordan Holder theorem.

Unit -- III

Solvable Groups and its properties, Commutator subgroup,Nilpotent Groups and its properties.

Unit -- IV

Fields: Extension field, Finite extension, Algebraic element,Algebraic and transcendental extension, Roots of polynomials, Splitting field.

Unit -- V

More about roots: Derivative of a polynomial, Simple extension,Primitive element, Separable and inseparable extension, Perfect field, Finite field.

Text Book:

1. I.N.Herstein:Topics in Algebra,Wiley Eastern,New Delhi.1975 (For Units I, III, IV, and V)
2. Vivek Sahai & Vikas Bist, Algebra, Narosa Publishing House, 1999 (For unit II)

Session 2018 - 2019 & Onwards

Class	Subject	Semester	Max.Marks	Min.Marks	Paper Title - Second
M.Sc.	Mathematics	I	35	12	Complex Analysis - I

Unit -- I

Complex integration .Cauchy-Goursat theorem,Cauchy integral formula,Higher order derivatives.

Unit -- II

Morera's theorem .Cauchy's inequality.Liouville's theorem.The fundamental theorem of algebra.Taylor's theorem.

Unit -- III

The maximum modulus principle.Schwartz lemma.Laurent series.Isolated singularities.Meromorphic functions.The argument principle,Rouche's theorem.Inverse function theorem.

Unit -- IV

Residues.Cauchy's residue theorem, Evalution of integrals.Branches of many valued functions with special reference to arg z, log z, za.

Unit -- V

Bilinear transformations.Their properties and classification.Definitions and examples of conformal mappings.

Session 2018 - 2019 & Onwards

Class	Subject	Semester	Max.Marks	Min.Marks	Paper Title - Third
M.Sc.	Mathematics	I	35	12	Functional Analysis

Unit -- I

Convergence, Completeness and Baire's Theorem, Cantors intersection Theorem, Continuous mappings, Uniformly continuous mapping, Spaces of continuous functions.

Unit -- II

Euclidean and Unitary spaces, Cauchy, Minkowski and Holders inequalities, Normed linear spaces, Examples and elementary properties,Equivalence of norms, Banach space and examples, Continuous linear transformations.

Unit -- III

Functionals and their extensions, related Lemma, Hahn-Banach Theorem for normed linear spaces, Conjugates of normed linear spaces, The natural embedding of normed linear space in its second conjugate space, Reflexive Banach spaces, open mapping theorem, Closed graph theorem.

Unit -- IV

Conjugate of an operator, Uniform boundedness principle and its applications, Inner product spaces and their elementary properties, Parallelogram law, Schwartz inequality and polarization identity, Hilbert Space and examples. orthogonal complements in Hilbert spaces.

Unit -- V

Orthonormal sets, Bessel's inequality, Gram Schmidt orthonormalization process, Conjugate Space of Hilbert Space, Riesz representation theorem.Adjoint of an operator, Properties.

Session 2018 - 2019 & Onwards

Class	Subject	Semester	Max.Marks	Min.Marks	Paper Title - Fourth
M.Sc.	Mathematics	I	35	12	Real Analysis

Unit -- I

Definition and existence of Riemann-Stieltjes integral and its Properties,Integration and Differentiation.The fundamental theorem of Calculus.

Unit -- II

Integration of vector-valued functions,Rectifiable curves, Rearrangements of terms of a series.Riemann's theorem.

Unit -- III

Sequence and series of functions.Pointwise and uniform convergence.Cauchy criterion for uniformn convergence, Weierstrass M-test, Abel's and Dirichlet's tests for uniform convergence, Uniform convergence and continuity,Uniform convergence and Riemann-Stieltjes ,integration,Uniform convergence and differentiation.Weierstrass approximation theorem,Power series,uniqueness theorem for power series,Abel's and Tauber's theorems.

Unit -- IV

Functions of several variables,Linear transformations,Derivatives in an open subset of R^n,Chain rule,Partial derivatives, Interchange of the order of differentiation,Derivatives of higher orders,Taylor's theorem,Inverse function theorem.

Unit -- V

Implicit function theorem,Jacobians extremum problems with constraints,Lagrange's multiplier method.Differentiation of integrals,Partitions of unity,Differential forms,Stoke's theorem.

Session 2018 - 2019 & Onwards

Class	Subject	Semester	Max.Marks	Min.Marks	Paper Title - Fifth
M.Sc.	Mathematics	I	35	12	Topology

Unit -- I

Definition and examples of topological spaces, Basis for a topology,Standard topology, lower limit topology, The order topology, The product topology on X xY. Projections, The Subspace topology, Closed sets and limit points, Closure and interior of a set, Hausdorff spaces.

Unit -- II

Continuous functions, Equivalence with ε-δ condition, Examples of continuous functions, the alternative conditions of Continuity,Homeomorphisms, topological property, topological Imbedding,Examples of Homeomorphisms, Rules for Constructing continuous functions, The Pasting lemma, Maps into products, The product topology, Box topology, Projection mapping, comparison of the product topology and the box topology.

Unit -- III

The Metric topology, Metrizable space, Standard bounded metric, The spaces R^n and R^w, Euclidean metric, square metric, Metrizability of Rn and Rw, Uniform metric, The sequence lemma, Uniform limit theorem.

Unit -- IV

Connected space, Separation, Definition and examples, Cartesian product of connected spaces, Connected sets in the real line, Linear continuum,Intermediate value theorem, Path connectedness, Definition and examples.

Unit -- V

Compact spaces, Finite product of compact spaces, The Tube Lemma,Finite intersection condition, compact sets in the real line, Maximum and minimum value theorem, Limit point compactness, The Lebesgue number : Lemma, Second countable and first countable spaces, Separation Axioms (T1, T2, T3 spaces).

Session 2018 - 2019 & Onwards

Class	Subject	Semester	Max.Marks	Min.Marks	Paper Title - First
M.Sc. / M.A.	Mathematics	II	35	12	Advanced Abstract Algebra - II

Unit -- I

The elements of Galois theory: Automorphism of a field, Group of automorphisms of a field, Fixed field, Normal extension,Galois group of a polynomial, Fundamental theorem of Galois theory,Solution of polynomial equations by radicals, Insolvability of the general equation of degree 5 by radicals.

Unit -- II

Introduction to Modules, Examples, Submodules and Direct sum of submodules, R-homomorphisms and Quotient modules, Finitely generated modules, Cyclic module.

Unit -- III

Simple modules, Semi-simple modules, Schur's lemma, Free modules, Rank of a module.

Unit -- IV

Noetherian and Artinian modules, Ascending and Descending chain condition (ace & dcc), Noetherian and Artinian rings, Examples, Hilbert basis theorem.

Unit -- V

Fundamental Structure theorem of finitely generated modules over a Principal Ideal Domain and its applications to finitely generated abelian groups.

Session 2018 - 2019 & Onwards

Class	Subject	Semester	Max.Marks	Min.Marks	Paper Title - Second
M.Sc. / M.A.	Mathematics	II	35	12	Advanced Discrete Mathematics

Unit -- I

Algebraic Structures : Introduction, Algebraic Systems : Examples and General Properties : Definition and examples, Some Simple Algebraic Systems and General properties, Homomorphism and isomorphism, congruence relation, Semigroups and Monoids : Definitions and Examples, Homomorphism of Semigroups and Monoids

Unit -- II

Lattices: Lattices as Partially Ordered Sets : Definition and Examples, Principle of duality, Some Properties of Lattices, Lattices as Algebraic Systems, Sublattices, Direct product, and Homomorphism.

Unit -- III

Some special Lattices, e.g. Complete, Complemented and Distributive Lattices, Boolean Algebra: Definition and Examples, Subalgebra, Direct product and Homomorphism, join irreducible, atoms and antiatoms.

Unit -- IV

Graph Theory: Definition of a graph, applications, Incidence and degree,Isolated and pendant vertices, Null graph, Path and Circuits: Isomorphism, Subgraphs, Walks, Paths and circuits, Connected graphs, disconnected graphs, and components, Euler graph.

Unit -- V

Trees: Trees and its properties, minimally connected graph, Pendantvertices in a tree, distance and centers in a tree, rooted and binary tree.Levels in binary tree, height of a tree, Spanning trees, rank and nullity.

Session 2018 - 2019 & Onwards

Class	Subject	Semester	Max.Marks	Min.Marks	Paper Title - Third
M.Sc. / M.A.	Mathematics	II	35	12	Complex Analysis - II

Unit -- I

Weierstrass factorization theorem.Gamma and its properties,Riemann Zeta function.Riemann's functional equation.

Unit -- II

Rung's theorem, Mittage-Leffler's theorem, Schwartz Reflection principle, Analytic Continuation, Analytic Continuationalong a path.

Unit -- III

Monodromy theorem and its consequences, Harmonic function, Harmonic functions on a disk, Harnack's inequality and theorem.

Unit -- IV

Dirichlet's problem, Green's function, Jenson's formula, Poisson-Jenson Formula.

Unit -- V

Order of an entire function, Hadamard's three circle theorems, Hadamard's factorization theorem, Bloch's theorem, The Little Picard theorem.

M.Sc. / M.A.	Mathematics	II	35	12	Lebesque Measure & Integration

Unit -- I

Lebesque outer measure.Measurable sets.Regularity.Measurable functions.Borel and Lebesque measurability.Non - measurable sets.

Unit -- II

Integration of Non-negative functions.The General integral.Integration of Series.Reimann and Lebesque Integrals.

Unit -- III

The four derivatives.Functions of Bounded variation.Lebesque Differentiation Theorem, Differentiation and Integration.

Unit -- IV

The L^p-spaces,Convex function,Jensen's inequality.Holder and Minkowski inequalities.Completeness of L^p.

Unit -- V

Dual of space when $1 \leq P \infty$, convergence in Measure, Unifrom Convergence and almost Uniform convergence.

Session 2018 - 2019 & Onwards

Class	Subject	Semester	Max.Marks	Min.Marks	Paper Title - First
M.Sc./M.A.	Mathematics	III	35	12	Linear Programming

Unit -- I

General Linear Programming Problem, Formulation of the Linear Programming Problem,Solution by Graphical method,Simplex method.

Unit -- II

Solution of a Linear Programming Problem by Big-M method, Two phase method,concept of duality, Fundamental theorem of duality, Dual simplex method.

Unit -- III

Assignment problem, Solution of assignment problem, Unbalanced Assignment Problem, Crew Assignment problem, Traveling Salesman problem.

Unit -- IV

Transportation problem, Initial basic feasible solution, Vogel's Approximation method,Optimality test by MODI method, Stepping Stone method, Degeneracy in Transportation Problem.

Unit -- V

Sequencing problem, processing n jobs on two machines, n jobs on three machines, n jobs on m machines, processing two jobs through m machines.

Semester wise Syllabus for Postgraduates As recommended by Central board of Studies and Approved by HE the Governor of M.P.

Session 2018 - 2019 & Onwards

Class	Subject	Semester	Max.Marks	Min.Marks	Paper Title - Second
M.Sc./M.A.	Mathematics	III	35	12	Mathematical Statistics

Unit -- I

Introduction: Attribute & variables, Frequency distribution and its representation. Measures of central tendency: Mean, Median & Mode, Geometric and Harmonic mean: Comparisons and usefulness of these measures. Measures of dispersion: Range, Mean deviation, standard deviation, their comparisons, measures based on mutual differences of observation, quartile deviation, curve of concentration. Moments: raw and central moments, Measures of Skewness & Kurtosis, sheppard's correction for moments.

Unit -- II

Probability theory and its application, Baye's theorem. Population & sample : Simple Random sampling (WR & WOR).

Unit -- III

Univariate Theoretical distributions: Binomial, Poisson, Hyper geometric, Negative Binomial, Uniform distribution, Normal distributions and its properties, Fitting of Binomial, Poisson and Normal distributions.

Unit -- IV

Bivariate distributions: Scatter diagram, Correlation coefficient and its limits, Correlation ratio and correlation index. Regression coefficients and lines, some related applications. Multivariate distributions: Multivariate data, Multiple and Partial correlation and coefficients. Rank correlation, Intra- class correlation.

Unit -- V

Basic Principles of Inference: Estimation and testing of hypotheses, Point and interval estimation, Maximum likelihood estimation, likelihood ratio tests. Confidence intervals. Tests based on t, F, $\chi 2$, and Z distributions. Joint distribution of attributes: - Data on two or more attributes, independence and association, Measures of association for 2 x 2case. Test for goodness of fit and homogeneity tests.

Session 2018 - 2019 & Onwards

Class	Subject	Semester	Max.Marks	Min.Marks	Paper Title - Third
M.Sc.	Mathematics	III	35	12	Advanced Special Function

Unit -- I

Gamma and Beta Functions : The Euler or Mascheroni Constant γ, Gamma Function, A series for $\Gamma'(z) / \Gamma(z)$, Difference equation $\Gamma(z+1) = z\Gamma(z)$.

Unit -- II

Beta function, value of $\Gamma(z)\,\Gamma(1-z)$, Factorial Function, Legendre's duplication formula, Gauss multiplication theorem.

Unit -- III

Hypergoemetric and Generalized Hypergeometric functions: Function ${}_2F_1$ (a,b;c;z) A simple integral form evaluation of 2F1 (a,b;c;z), Values of F (a,b;c;1) and F (-n,b;c;1) etc.

Unit -- IV

Contiguous function relations, Hypergeometric differential equation and its solutions, F (a,b;c;z) as function of its parameters.

Unit -- V

Elementary series manipulations, Simple transformation, Relations between functions of z and 1–z

Session 2018 - 2019 & Onwards

Class	Subject	Semester	Max.Marks	Min.Marks	Paper Title : Fourth
M.Sc./M.A.	Mathematics	III	35	12	Applied Functional Analysis

Unit -- I

Hilbert spaces obtained from Hilbert spaces, Cartesian and Tensor product of Hilbert spaces, convex sets and and projections. Projection on a cone and a linear subspace.

Unit -- II

Weak convergence, Weak compactness properties, Baire's Category Theorem, sequence of continuous linear functional, Banach Saks, Theorem, Weak semi continuity,Continuity of Projection on a closed convex set.

Unit -- III

Convex sets and convex programming elementary notions, internal, bounding and external points. Support functional of functional of a Convex set, simple example, Minkowski functional support plane through a boundary point, support support mapping,Separation theorem.

Unit -- IV

Functions transformations and operators, Linear operators and their adjoints, bounded and unbounded operators projection operator and differential operator.

Unit -- V

Spectral theory of operators, resolvent of operator, resolvent set and spectrum. Spectral radius, Compact operators, operators,its characterizing property.

Session 2018 - 2019 & Onwards

Class	Subject	Semester	Max.Marks	Min.Marks	Paper Title : Sixth
M.Sc./M.A.	Mathematics	III	35	12	Fuzzy Sets and their Application

Unit -- I

Idea of fuzzy set and membership function, Definition of a fuzzy set, Membership function, representation of membership function, General definition and properties of fuzzy set's, Support, height, equality of two fuzzy sets, containment, examples.

Unit -- II

Union and Intersection of two fuzzy sets, Complement of a fuzzy set, normal fuzzy set, α-cut set of a fuzzy set, strong α-cut, convex fuzzy set, a necessary and sufficient condition for convexity of a fuzzy set (Theorem I), Decomposition of fuzzy sets, Degree of subsethood, Level set of a fuzzy set, Cardinality, fuzzy cardinality, examples.

Unit -- III

Other important operations on fuzzy sets, Product of two fuzzy sets, Product of a fuzzy set with a crisp number, Power of a fuzzy set, Difference of two two fuzzy sets, Disjunctive sum of two fuzzy sets, examples.

Unit -- IV

General Properties of operations on fuzzy sets, Commutativity, associativity, distributivity, Idempotent law, identities for operations, Transitivity, involution, Drmorgans laws, Proofs and examples, Some important theorems on fuzzy sets, set inclusion of fuzzy sets and corresponding α-cuts and strong α- cuts (Theorem 1).

Unit -- V

Comparision of α-Cut and strong α-cut, Order relation of scalars is inversely preserved by set inclusion of corresponding α-cuts and strong α-cuts, α-cut of union and intersection of two fuzzy sets, α-cut of complement of a fuzzy set (Theorem 2), Examples, α-cuts and strong α-cuts of union and intersection of arbitrary collection of fuzzy sets.

SYLLABUS OF M.A. /M.Sc. MATHEMATICS SEMESTER SYSTEM SEMESTER – IV
(Session 2018- 19 and onwards)

Syllabus opted by the board of studies in Mathematics

Choose any **five Papers** out of the following optional papers.

S.No.	Paper	Name of the Papers	Theory (MM)	Min. Pass. Mark	C.C.E.	Min.Pass. Mark	Practical M .M.	Min.Pass mark	Total
1	I	Operations Research	35	12	15	5	–	–	50
2	II	Spline Theory	35	12	15	5	–	–	50
3	III	Programming in C (Theory and Practical)	35	12	15	5			50
4	IV	Advanced Special Function - II	35	12	15	5			50
5	V	Integral Transform - II	35	12	15	5	–	–	50
6	VI	Algebraic Topology	35	12	15	5	–	–	50
7	VII	Theory of Linear Operators	35	12	15	5	–	–	50
8	Job- Oriented Project Work & Internship of 60 Hours		40+10 Internal (Teacher-Guide)		50 Comprehensive Viva-Voce and Presentation				100
Grand Total									**350**

1) In attendance 10 marks is allocated as per ordinance No. 79 of R.D. University Jabalpur.
2) The students, whose attendance is less as per ordinance No. 79 of R.D. University Jabalpur, will not allow to appear in the examination at the close of semester and he/she would be declared having failed in that Semester.
3) In project 40 marks is allocated. Out of 40 marks, 15 marks is allocated for project file, 15 marks is allocated for presentation of their project work and 10 marks is allocated for project Viva-Voce examination.
4) At the end of IV semester a Comprehensive Viva-Voce is to be conducted by a board of at least three examiner which includes at least one external examiner.

Session 2018 - 2019 & Onwards

Class	Subject	Semester	Max.Marks	Min.Marks	Paper Title : First
M.Sc./M.A.	Mathematics	IV	35	12	Operations Research

Unit -- I

Operations Research and its scope. Origin and Development of Operations Research, Characteristics of Operations Research, Model in Operations Research, Phase of Operations Research, Uses and Limitations of Operations Research, Linear Programming Problems,

Unit -- II

Inventory theory : Inventory models on economic lot size system with uniform and non uniform demand, Economic leet size with finite rate of replenishment, A simple order level system with constant rate of demand with shortage, Generalized economic leet size model, Multi items deterministic models, Probabilistic model, Instantaneous demand no setup cost model, Uniform demand, no setup cost model

Unit -- III

Replacement problem: Replacement problem when money value does not change/changes with Time, Group replacement policy, Mortality theorem.

Unit -- IV

Network analysis, constraints in Network, Construction of network, critical Path Method (CPM)PERT, PERT Calculation, Resource Leveling by Network Techniques and advances of network (PERT/CPM),

Unit -- V

Game theory- Two persons, Zero-sum Games, Maximin - Minimax principle, games without saddle points- Mixed strategies, Graphical solution of 2xm and mx2 games, Solution by Linear Programming,

Session 2018 - 2019 & Onwards

Class	Subject	Semester	Max.Marks	Min.Marks	Paper Title : Second
M.Sc./M.A.	Mathematics	IV	35	12	Spline Theory

Unit -- I

Polynomial Interpolation: Lagrange form, Divided difference and Newton form, K-th divided difference, Osculatory interpolation, Limitation of polynomial approximation, Runge example.

Unit -- II

Piecewise linear approximation: Broken line interpolation is nearly optimal, Least-squares approximation by broken lines, Good meshes, square root example.

Unit -- III

Piecewise cubic interpolation: Cubic Hermite interpolation, Cubic Bessel interpolation, Akima interpolation, Cubic spline interpolation, Boundary conditions, Best approximation properties of complete cubic spline and its error, Truncated power function, Pythagoras theorem, smoothest interpolation property, Best approximation property.

Unit -- IV

Parabolic spline interpolation: Difference of two parabolic splines, interpolation of data values given at mid points of mesh intervals, Existence and uniqueness of parabolic splines, Piecewise polynomial representation for $P_{k,\xi}$.

Unit -- V

The space $P_{k,\xi,v}$ and truncated power basis: The smoothing of a histogram by parabolic splines, truncated power basis, truncated power function, representation of a function of $P_{k,\xi,v}$, The representation of pp function by B-splines, The support of B-splines, Partition of unity by B-splines, Spline function as a combination of B-splines

Class	Subject	Semester	Max.Marks	Min.Marks	Paper Title : Third
M.Sc./M.A.	Mathematics	IV	35	12	Programming in C (Theory and Practical)

Unit -- I

Introduction to C language- Overview of C Language: History of C Language, Feature of C Language, Structure of C program, A Simple C Program, Compiling a C Program, Character Set in C, Keywords, Constants, Variables in C Type declaration, Types of Outptut Function and Input Function, Basic Data types.

Unit -- II

Operators: Arithmetic operators, Unary operators, Relational and logical Operators, Increment and Decrement Operator, Condititional Operator, Bit- wise Operator, Assignment Operators, Precedence & Associativity Expressions, type casting.

Unit -- III

Control Statements: Conditional Expressions if statement, if-else statement, switch and case statement, loop-statement: for loop, while loop, do while loop, break, continue and goto statement. Writing programs using conditional expression.

Unit -- IV

Scope of Variable: local and global variable, storage classes of C variable. Arrays (single dimension & multidimensional array).
Functions: Introduction to Function, Library Function (Mathematical Function & String Function), User Defined **Function :** Declaration and Prototype, Function Definition, Concept of function parameters and how they are passed, Recursion. Function, Writing Program using recursive and non recursive functions.

Unit -- V

Pointers: declaration, pointer Arithmetic, Structures, arrays of structures. Concept of Union. Differences between Structure and Union.
