

Outcome based education

The institution offers OBE that focuses on the skills and knowledge that the students will gain at the end of their learning experience.

Some of the key features of this education are:-

- **Clearly defined outcomes-** The curriculum delivery methods and assessments are all designed to meet specific learning goals which include outcomes like critical thinking, problem solving, communication skills, personality development career orientation and specific technical knowledge.
- **Participative learning-** Ensuring the involvement of students in teaching learning by giving them opportunities to apply their knowledge and skills in activities such as seminars, workshops, conferences, group discussions management of events, publishing of departmental and wall magazines, teaching by advance learner etc.
- **Assessments-** In OBE the students are assessed throughout their learning to see to what extent the outcomes are met. It includes methods like test, projects, presentation, assignments, quizzes, competitions etc.

Thus OBE is a more practical approach to education there by preparing the students for a better future adaptation to real world situations.
